

Color Star Johannes Itten \$36.95 950-078

One of the most difficult things to do, until your eye is trained to do it, is to visualize harmonic color combinations. The color star provided here is somewhat similar to a color wheel but it is different in shape and comes with eight different templates which you can place on it. With them you can selectively examine the relationships of primary, secondary and tertiary colors. Cool and warm values, complementary colors, and different hues and intensities can be compared individually as you use the stencils to see only the wanted colors.
