

Color and Fiber Patricia Lambert \$60.00 [950-646](#)

This is an excellent, comprehensive guide to color, divided into three parts. The first presents essential terminology, ideas, and definitions about light and color as preparation for the problems, projects and ideas which follow. The second section describes how light, dye and pigment work with fibers because individual fibers, yarns and fabrics differ in their responses to light and color. The third section presents the practical applications for the information gained in the first two sections. Profusely illustrated in black & white and color.
