

The Magic of Handweaving      Sigrid Piroch      \$27.95 950-853

Those of us who have been weaving for a while probably remember the classic books on weaving, often written back in the days of yore by great teachers who, frankly, did not have the magic of modern publishing available to them. We got by with our references and some good workshops and guild members, but to get a good overview of what can be done on all manner of looms, there just was not much. To have a history of global weaving looms and techniques, to have contemporary masters' work presented, to have detailed instructions for simple to complex weaving techniques, and to have a good collections of projects for many different looms, all in one graphical, colorful book... well, it's wonderful. Beginners will certainly see their path into the world of weaving clearly, and experienced weavers will find new inspiration in this well-presented weaving textbook.
